

## Utilising, processing and reusing resources

### Strong response for ARJES at IFAT Munich 2022

The world's leading trade fair for water, sewage, waste and raw materials management, IFAT Munich, once again impressed after its forced break in 2020. 2,984 exhibitors from 59 countries and around 119,000 visitors from a total of 155 countries came together at the world's most important platform for environmental technologies.

Even the ARJES team was impressed by the international participation of interested trade visitors as well as the numerous personal meetings with its global business partners. More than half of the guests travelled from German-speaking countries and neighbouring European countries. But also visitors North and South America, Eastern Europe and even some countries in the Far East visitors and sales partners decided to visit us at the ARJES stand.

*„Once again IFAT Munich was able to show us the importance of the direct exchange with our existing and new customers as well as distributors is for our company. Seek and maintain personal contact with our business partners is an essential part of our company philosophy“,* emphasises Martin Priewe, marketing employee of ARJES GmbH..

ARJES presented its innovative shredding solutions for processing numerous types of waste at IFAT Munich 2022. With the IMPAKTOR, EKOMAXX and TITAN product lines, almost every interested party found the right machine for the existing challenges in its price class.

In addition to the stationary electric version of the best-selling IMPAKTOR 250, the new mid-range machine from ARJES also met with great interest among the trade visitors. With EKOMAXX 800, users and companies from the wood and waste management industry in particular came across a problem solver in recycling. With the EKOMAXX product line, ARJES focuses on an optimal cost-benefit ratio for the maximum benefit of its customers. The introduction of the new machine generation is to replace the previously known shredders of the VZ 750 and VZ 850 series and is to be equipped with all the advantages that have been standard for the machine manufacturer from Leimbach for years.

Exhibition visitors looking for enormous throughput capacities or particularly demanding areas of application in the processing of their waste were able to take a closer look at the TITAN 900 on the ARJES stand. Countless areas of application within the performance class can be found in the construction and demolition industry, in the shredding of mixed scrap, car bodies, car, truck, AS and EM tyres, in the processing of domestic and commercial waste as well as in composting and wood processing companies. Anyone who still had doubts about the performance of the machines could convince themselves at the ARJES stand with exemplary application videos of the TITAN series.

*'I was very impressed by the high quality of the technical discussions with important decision-makers in the industry. This is proof that the past two years of the Corona crisis have in no way diminished the market presence and success of ARJES. Our strategy of addressing the market for recycling technology with the best price-performance ratio succeeded!'* says Chris Erbe, Sales Director of ARJES GmbH.
