

ARJES with stronger presence at the IFAT Munich 2024

Maximum power, innovations and exclusivity!

The IFAT Munich, world's leading trade fair for water, sewage, waste and raw materials management, is to begin shortly. It takes place from May 13 to May 17, and as in the years before, it promises to become an absolute highlight for the international recycling industry. Everyone interested in the latest trends and developments in the field of industrial pre-shredding of waste, should go there and visit the booth of ARJES!

As we made good experiences with changing the location of the ARJES head office in the last year, we want to delegate that dynamic to the IFAT Munich. With an exhibition space twice of the previous size, we relocate the midst of events from indoors to the open air and thereby set an example of our dynamic growth! On impressive 560 square meters, we showcase the best of the current ARJES and EuRec product portfolio and give a first look at the technological innovations of the future.

In keeping with the motto "never change a running system", we bring our well-known frontrunner back to the market, but with the new name **COMPAKTOR 300**. Especially disposal companies of the construction and demolition industry appreciates the ARJES brand for its very flexible and robust shredders available with the best price-performance ratio in the industry. Despite that in principle, we are leaving everything as it was, industry experts can expect several detail enhancements and optimizations and convince themselves on site.

But there's more to it than that! The mobile shredder **EKOMAXX 800** offers all the advantages that belong to the ARJES standard equipment: crawler track system, shaft quick change system, and a user-friendly SCU control with asynchronous shredding technology. What's new is the standard installed tilting hopper, which improves the efficient treatment of domestic and commercial waste as well as natural and waste wood significantly.

With a remarkable special painting, the **TITAN 900** is ready to catch the attention of the fair visitors. Not only is the outer appearance an absolute eyecatcher, but with the basically new touch display control and several user-friendly, preconfigured adjustment options we give an exclusive insight into the future of ARJES machine control systems. Dear industry experts: don't miss that special opportunity!

Who is looking for ultimate power and performance, is exactly in the right place with our absolute power pack **TITAN 950 e-pu**. With this machine, metallic, recyclable materials like car bodies, white goods, engine blocks, light scrap and even high-voltage lines can be shredded easily. After individual consultations with the final customer, the stationary two-shaft shredder can become part of existing recycling plants with either electric drive or diesel engine.

With taking over the EuRec brand in the last year, we were able to expand our product portfolio. During the IFAT Munich 2024, ARJES will introduce an entirely new type of product, the **EuRec S-850**. Just to mention a few things: Our design engineers thought a lot about how to bring this new type of machine to life. Come to the ARJES/EuRec booth and exclusively get to know the first prototype!

You want to experience the future of industrial shredding technology in the recycling industry? Then visiting the IFAT Munich should be your first stop! Set a red mark in your calendar for the time from May 13 to May 17, 2024,

and visit our **booth FM. 709/11** on the **outdoor area** of the **Messe München**. Our team is looking forward to industry visitors, exciting discussions, and a successful exhibition in the very best atmosphere.
