

ARJES & EuRec bring Shredding Power live to Karlsruhe

Showcase the FERRO 950 live at RATL 2025

From October 9 to 11, 2025, Messe Karlsruhe will once again transform its grounds into a stage with a unique demonstration character as [RecyclingAKTIV & TiefbauLIVE \(RATL\)](#) opens its doors. Hardly any other trade fair offers such a variety of hands-on demonstrations: from model construction sites to action areas and live demos right at the exhibitors' booths. Here, visitors can not only see machines – but experience their full power in action and compare them directly.

Joint Presence at Booth F202

At our outdoor booth, ARJES GmbH and EuRec Environmental Technology GmbH will showcase their solutions in the field of slow-speed two-shaft shredders. Together with our sales partner [Fischer and Schweiger](#), we will demonstrate the efficient pre-shredding of green waste and roots with the [EuRec ULTIMA 850](#) live on site. In addition, ARJES will present the reinforced version of the [EKOMAXX 800](#), which has been upgraded with revised features and technical enhancements tailored to meet current market demands.

Particularly convenient: with [Kölsch Baumaschinen](#) and [Moerschen Mobile Aufbereitung](#), two more strong ARJES dealers will be directly neighboring our booth – ideal for short distances, comprehensive advice, and direct professional exchange with us and our sales and service partners.

Live Spectacle: Shredding Car Bodies

The spotlight of this year's "Scrap & Metal" action area is on the brand-new EuRec FERRO 950, which uncompromisingly shreds entire car bodies right before the eyes of the professional audience – a highlight not to be missed. After already attracting great attention as an exhibit at bauma in Munich, the machine will now celebrate its hands-on live premiere in Karlsruhe before the RATL audience.

"At RATL 2025, we are showing that our technology doesn't just look impressive – it also delivers under real-life conditions," emphasizes Martin Priewe, Marketing Director at ARJES GmbH. The FERRO 950 was developed for extreme applications with high iron content. Whether car bodies, concrete railway sleepers with reinforcement steel, or light scrap – the two-shaft shredder proves itself wherever maximum performance, reliability, and wear resistance are required.

Our Invitation – Secure Your Free Trade Fair Ticket

RecyclingAKTIV & TiefbauLIVE is far more than a trade fair – it is a hands-on live experience for everyone who doesn't just want to see machines but experience them in real operation. ARJES and EuRec warmly invite their customers, business partners, and all interested parties to be part of this event. Secure your free trade fair ticket now and experience ARJES and EuRec live at RATL 2025 in Karlsruhe:
