

## Our review of the year 2025

### A Year of Energy, Growth and Milestones

For ARJES GmbH, 2025 was a year marked by momentum and intensive international collaboration. Despite a challenging market environment and demanding global economic conditions, we achieved strong double-digit revenue growth compared to the previous year. This success further underlines our position as a globally leading brand in the field of slow-speed shredding technology.

#### Review: Stability, Innovation and Global Presence

With a total of 250 machines manufactured and delivered across our mobile and stationary [product lines](#) COMPAKTOR, EKOMAXX and TITAN, we once again demonstrated that reliable recycling technology from Thuringia is in high demand worldwide. A key contributor to this success was the relaunch of the [EuRec](#) brand. Under the guiding principle *"Proven Technology – Rethought"*, two new machine types were successfully introduced to the market: the ULTIMA 850 and the FERRO 950. In addition, the expansion of our company premises by 7,000 square meters and the further development of our production facilities have sustainably strengthened our manufacturing capacity, creating ideal conditions for continuous growth.

A particular highlight of the year was the market launch of the mobile EuRec [FERRO 950](#). Designed for extremely robust material streams with a high ferrous content, it became a focal point of attention at [bauma](#) in Munich and met with strong market demand. At the same time, we expanded our [dealer network](#) across Europe, North and South America, and other regions to a total of 40 exclusive sales and service partners. Special recognition goes to our UK partner Doyle Machinery, which was awarded as the most successful dealer in ARJES company history.

Whether at [bauma](#) Munich, IFAT Brazil and India, Pollutec in France, Ecomondo in Italy, or numerous other international trade fairs, the ARJES team together with our sales and service partners presented our solutions convincingly and made them tangible on the global stage.

Beyond technological and economic achievements, ARJES also set a clear social example in 2025. Through various initiatives, we actively demonstrated our social responsibility and reaffirmed our strong ties to the region.

#### Outlook: Further Development, Expansion and Trade Fair Highlights

By expanding the ARJES product portfolio to include coarse-material and drum screening systems, additional successor models within the EuRec product lines, and by continuously increasing production capacities, we are creating stable conditions for sustainable growth and for meeting the already secured order backlog for the coming year 2026.

A particular highlight will be [IFAT Munich](#) from May 4 to 7, 2026. Our teams are already working intensively to present ARJES and EuRec impressively at one of the most important trade fairs in our industry and to make upcoming technical innovations tangible for visitors.

We would like to sincerely thank all customers and business partners for their trust and successful cooperation in 2025. These partnerships form the foundation of our work and our shared success. We wish you and your families a wonderful Christmas season, relaxing holidays and a successful start to the New Year.
